

## MM802 MINI PROJECT README:

In order to be able to run the first of all you have to make sure that all of the files included in the zip folder are unzipped in the same directory, furthermore for viewing the website Index.html which is our main page needs to be opened, for testing the functionality of the charts and graphs; You may need to open the website using any browser other than google Chrome since It doesn't provide access to the data for being shown on the graphs.

Furthermore, once you open Index.html our website will open and through it you can access all the other links which are included containing all the filters and graphs.

All of our graphs are receiving their data from WorldCups.csv and WorlCupMatches.csv datasets which are also attached in the same file.

You can find all the Images which we have used in our website through assets->imgs folder which is included in our zip file.
